

1. Line 64 through 67a:

64 where the project is located is non-irrigated cropland of a capability class five or six, as
 65 designated by the Natural Resources Conservation Service.
 66 (3) A proposed solar power plant located on grazing land is not eligible to receive state
 67 incentives if the land produces greater than $\hat{H} \rightarrow [\{ \textcolor{blue}{1,000} \}] \textcolor{red}{250} \leftarrow \hat{H}$ pounds of
 67a vegetative production per

2. Line 68 through 69:

68 acre in a normal year, according to the Web Soil Survey produced by the Natural
 69 Resources Conservation Service.

3. Line 68 through 74:

68 acre in a normal year, according to the Web Soil Survey produced by the Natural
 69 Resources Conservation Service.
 70 (4) A proposed solar power plant located on grazing land may receive half of an eligible
 71 state incentive if the land produces between $\hat{H} \rightarrow [\{ \textcolor{blue}{500} \}] \textcolor{red}{125} \leftarrow \hat{H}$ and $\hat{H} \rightarrow [\{ \textcolor{blue}{1,000} \}]$
 71a $\textcolor{red}{250} \leftarrow \hat{H}$ pounds of vegetative
 72 production per acre in a normal year, according to the Web Soil Survey produced by the
 73 Natural Resources Conservation Service.
 74 (5) In accordance with Subsection 17D-3-103(2), a conservation district may make a
